

Basic Division Worksheets For Kids

Introductory Division worksheets

This division worksheet is for learning how to solve a basic division problem using shapes and objects. Kids need to write the quotient of the division problems, when dividend and divisor are given. First problem is done as an explanation to help kids understand the concept. There are more [division worksheets](#) to come on the same concept. So don't rush, let kids take their time to learn the concept on their own pace.

[Division Worksheets](#)

1) Solve $15 \div 3 = ?$

To solve above problem, draw 15 counters as shown in the picture at right.

Now, make groups of these counters keeping 3 counters in a group, as shown below:

Now, count the number of groups of 3's. There are five groups, hence 15 divided by 3 to get 5

Hence the answer is $15 \div 3 = 5$

Now write the other facts too, if you can:

$$15 \div 5 = 3$$

$$3 \times 5 = 15$$

$$5 \times 3 = 15$$

2) Solve $18 \div 6 = ?$

We need to draw 18 counters and group them by keeping 6 in a group. Count the number of groups of 6 to get the answer as shown below:

So, we get 3 groups as shown above and hence 18 divided by 6 is equal to 6.

Write your answer as $18 \div 6 = 3$

Again if kids like, they can write other facts too:

$$18 \div 3 = 6$$

$$3 \times 6 = 18$$

$$6 \times 3 = 18$$

3) Solve $6 \div 2 = ?$

4) Solve $8 \div 2 = ?$
